### PROFESSIONAL SUMMARY

Senior Frontend Engineer with 6 years of experience building production React applications for enterprise and public-sector clients across the Middle East, United States, and Australia. Currently work on Masdr's CX platform, an 11-app micro frontend system built with Module Federation, covering dashboards, real-time voice and video, multi-tenant support, and bilingual Arabic/English interfaces. Lead a team of 3 engineers and have deep experience in data visualization, micro-frontend architecture, and RTL internationalization.

### SKILLS

**Frontend:** ReactJS, Next.js, TypeScript, JavaScript (ES6+), Redux Toolkit, Zustand, React Hooks, React Router, RxJS, HTML5, CSS3, SCSS/SASS, Material UI, Styled Components, Responsive Design

**Architecture:** Micro Frontends, Vite Module Federation, Multi-Tenant White-Labeling, Design Systems, State Management, REST API Integration

**Data Visualization:** ApexCharts (area, gauge, stacked bar, trend, scatter, radial charts), React Charts, comparison mode, drill-down navigation, annotations, KPI targets, query-builder interfaces

**Real-Time & Media:** LiveKit, WebRTC, Socket.IO, XMPP, Server-Sent Events, WebSockets, Web Speech API, media track & room lifecycle handling

**Backend & APIs:** Node.js, Express.js, RESTful API design, Microservices architecture

**Security & Auth:** Keycloak SSO, OAuth2/OIDC, JWT, Axios interceptors, HMAC-signed requests, government digital-ID verification, reCAPTCHA

**Internationalization:** i18next, Arabic & English RTL/LTR, locale management, bidirectional layout mirroring

**Code Quality & Testing:** SonarQube, Vitest, Jest, Cypress, React Testing Library, ESLint, Prettier, Accessibility (a11y), Unit & Integration Testing, Coverage Reporting

**DevOps & Cloud:** Jenkins, Docker, Kubernetes, Helm, Nginx, CI/CD, AWS, Azure, Vite, Webpack, Babel, Flagsmith, Grafana, Git, GitLab, GitHub, Bitbucket, Jira

**General:** Performance Optimization, Code Splitting, Lazy Loading, Memoization, Agile/Scrum/Kanban, Technical Documentation, Mentoring

### EXPERIENCE

#### Senior Frontend Engineer | Masdr

Nov 2024 - Present

CX Platform · Riyadh, Saudi Arabia (Remote)

Bilingual Arabic/English CX platform for government and enterprise tenants, delivering voice, video, and chat across 11 federated React micro frontends (Vite Module Federation) on Kubernetes.

- Built analytics dashboards for customer satisfaction, service efficiency, response quality, and automation metrics using ApexCharts, including a query-builder interface for custom charts and a reusable chart-configuration layer to standardize new visualizations.
- Developed admin screens for role, service, shift, and site management, self-service tenant onboarding flows, and real-time supervisor dashboards driven by Server-Sent Events.
- Built AI-assisted call analysis views covering transcription, summarization, sentiment, and intent detection, along with configuration screens for virtual agents, including handoff from AI bot to human agent during a live call.
- Worked on migrating the platform from a legacy XMPP/WebRTC stack to LiveKit and Socket.IO, covering call join, multi-user tile view, hold, transfer, screen share, and call recording, plus a silent-monitoring mode for supervisors.
- Added real-time multi-user call translation and sign-language call support to improve accessibility across the customer journey.

- Implemented multi-tenant white-labeling and a secure embed flow for integration with a government superapp, so a single build serves multiple tenants unchanged across environments.
- Built authentication and security features, including Keycloak SSO, JWT-based Axios interceptors with background token refresh, HMAC-signed API requests, and government digital-ID verification (Nafath/Absher) with reCAPTCHA.
- Rolled out Flagger feature flags and Grafana logging across services to support safer, tenant-aware releases.
- Delivered Arabic/English RTL localization across dashboards, forms, and in-call controls, including on mobile.
- Contributed reusable components to a shared Storybook design system used across all 11 micro frontends, led a team of 3 frontend developers, and worked on sustained SonarQube remediation platform-wide.

*Tech Stack: React 18, TypeScript, Redux Toolkit, ApexCharts, Vite Module Federation, LiveKit, Socket.IO, Keycloak, i18next, Vitest, SCSS*

## Software Engineer | Thomson Reuters

Jun 2023 – Oct 2024

*Review Wizard — Tax Document Review & Verification Platform (United States) • Remote*

- Migrated a legacy Windows desktop application into a responsive React web app on a microservices-backed architecture, enabling scalable, cross-device access for reviewers.
- Cut document processing time by 30% using RxJS-driven hotkey handling and debounced input processing across high-frequency review screens.
- Built OCR-backed verification modules for U.S. tax forms, improving extracted-data accuracy by 25% and reducing manual correction effort.
- Replaced prop drilling with Zustand for predictable state management, reducing re-render overhead.
- Collaborated across U.S. and Middle East teams, incorporating user feedback into iterative design to raise satisfaction and cut error rates.

*Tech Stack: ReactJS, Zustand, RxJS, REST APIs, Microservices, React Testing Library, Git, CI/CD, Agile*

## Member of Technical Staff | Mindstix Software Labs

Sep 2022 – Feb 2023

*Lennar — Green Folder Experience (United States) • Remote*

- Led frontend performance optimization, cutting page load time by 20% through code splitting and asset optimization.
- Integrated custom Google Maps functionality for property location and neighbourhood browsing.
- Translated Figma designs into responsive interfaces and implemented autosave to prevent data loss on long forms.
- Delivered features on an Agile/Scrum cadence, coordinating closely with the client's product and backend teams to keep sprints on schedule.

*Tech Stack: ReactJS, Redux, Material UI, Google Maps API, React Testing Library, Git, Agile/Scrum*

## Software Developer | Edstem Technologies

Sep 2020 – Aug 2022

*RLC — Response Learning / iLearn (United States) • Remote*

- Built a call-centre training platform with in-browser speech capture and speech-to-text conversion, improving training efficiency by 15%.
- Implemented a scoring engine comparing trainee speech against reference scripts to track and surface performance metrics.

*Tech Stack: ReactJS, Redux, Material UI, Web Speech API, React Testing Library, Git, Agile*

*Trinity Marythoma Church (United States) • Remote*

- Led the revamp of an accounting dashboard with role-based access control, generating financial reports in PDF and tabular formats and building React chart components to visualize profit and income trends for better operational transparency.

*Tech Stack: ReactJS, Redux, Material UI, React Charts, Styled Components, Git*

*One Doorway (Australia) • Remote*

- Built an elder-care shift rostering system with a week-view schedule, time-slot booking, and availability/constraint validation for coordinators.

*Tech Stack: ReactJS, Redux, Material UI, Styled Components, React Testing Library, Git*

## EDUCATION

**Bachelor of Science in Computer Science** | Kishinchand Chellaram College, University of Mumbai | GPA 8.53/10 | 2016 – 2019
